

## PR-13

- Rope trampoline playground is made of steel rope and steel pipes.
- Elastic, cord fabric reinforced sheet is used in the trampoline section.
- The game element is obtained by stretching the rubber sheet on 6 main poles with Ø140 SDM diameter with ropes coming to the middle.
- The pipes are coated with polyester-based electrostatic powder paint and are baked in a 200°C oven for 20 minutes.
- Main pipes are closed with cap plugs.
- The height of the game element from the ground is 190 cm
- Braided rope is at least Ø16 mm in diameter.
- Each rope consists of 6 steel rope helixes, consisting of 7 steel yarns, around the center made of polyamide raw material fiber.
- Steel core rope consists of 42 reinforced steel ropes in total.
- It does not contain toxic substances in its content and paint.
- The outside of the rope is knitted with polyamide threads.
- Steel wires are manufactured in such a way that they remain in the center of the polyamide ropes so that they do not touch the user.
- The connection points with the concrete floor are made with laser cut platinum.
