

PY-135 Hexagonal Platform

- The hexagonal platform is obtained by combining 2 half-hexagonal platforms. The platform is manufactured from perforated sheet metal with a minimum size of 116 cm x 116 cm x 116 cm x 232 cm and a minimum wall thickness of 1.5 mm-2 mm.
- Flat designed surface; It is designed to prevent slipping and not allow water retention.
- In the middle of the platform, support sheets are welded to the lower part in order to prevent the sheet from flexing.
- The corners of the platform are manufactured in the form of a quarter circle, enclosing the 114 mm pipe.
- Before the coating process, the sheets are washed with special chemicals, cleared of oil and dirt that will prevent the coating on them, and then coated with the priming method.
- After the priming process, the upper surface of the platform is hot-dip method with an anti-static material mixture with a hardness of -60 ± 5 share A, a density of 1 gr/cm^3 , minimum kgf/cm^2 breaking strength, 650-700% breaking elongation, and 100 m^3 (max) abrasion. PVC (Plastisol) coating is made.
- PVC thickness is produced at a minimum of 2 mm at each point.

Dimensions	Platform Dimensions	116*116*116*232
	Sheet Thickness	2 mm - 8 cm
Features	Plastisol Coated Platform
